

jetNEXUS Application Delivery Control technology forms a comprehensive solution for application acceleration, scalability and resilience of Sage CRM.

jetNEXUS & Sage CRM

Increase

- Speed
- Security
- Scalability
- Resilience
- End User Satisfaction
- Application Availability

Reduce

- End-User Delays
- Expenditure
- Application Down Time
- Server Load
- Bandwidth Requirements

Flexible Deployment

jetNEXUS solutions can be easily tested and deployed on a number of platforms:

- Powerful hardware
- Certified virtual appliance
- Bootable ISO image
- Cloud infrastructure

Sage CRM Business Critical Application

Sage is about as near to a household name as it is possible for a line-of-business application to get. Sage's software suite is deployed to over 750,000 customers in the UK alone, and more than 6 million worldwide. Its place at the heart of a company's financial health makes it a mission critical application for each and everyone of its customers.

As part of the evolution of the businesses in which it's deployed, increasingly Sage CRM users are accessing it over the WAN meaning performance is often hampered by network issues that dramatically hinder productivity and end-user acceptance.

Sage CRM is absolutely critical to the businesses that implement it, therefore it is vital that it has:

- **Superb Performance**
- **Robust Security**
- **Flexibility**
- **Scalability**
- **High Availability**
- **Resiliency**

Is your Sage CRM installation performing as well as it should?

Typically Application deployments absorb huge amounts of expenditure, whether it be in the initial purchase of the software, installation and configuration, or subsequent investments in infrastructure. Yet still, many companies find themselves asking the question, "Why is my application running so slowly?"

The sheer amount of data that Sage CRM stores and processes can make it challenging for system architects to ensure the delivery of fault tolerant and accelerated performance for all CRM users. Far too often IT teams find themselves simply throwing more servers and additional bandwidth at the problem but with negligible impact.

The Intelligent Choice

As the market evolves, more and more IT teams are starting to realise that not all technologies offer innovative solutions to meet the next generation of IT needs.

Increasingly, companies are looking towards Application Delivery Controllers (ADCs) to address poor application performance, unreliability and security concerns.

Application Delivery Controllers become actively involved in the delivery of the application and provide sophisticated capabilities for true application fluency.

“ADCs provide a set of functions to optimize enterprise application environments. The market evolved from the load-balancing systems that were specifically developed to ensure the availability and scalability of websites. Enterprises use ADCs to optimize reliability, end-user performance, data center resource use and security for a variety of enterprise applications.”

Gartner.

jetNEXUS Features

- Layer 4-7 load balancing
- Content caching
- Content compression
- Connection management
- Application acceleration
- SSL offload
- flightPATH routing engine
- Server monitoring
- Intuitive user interface
- Virtualised networking
- Reporting / logging

Cost Effective

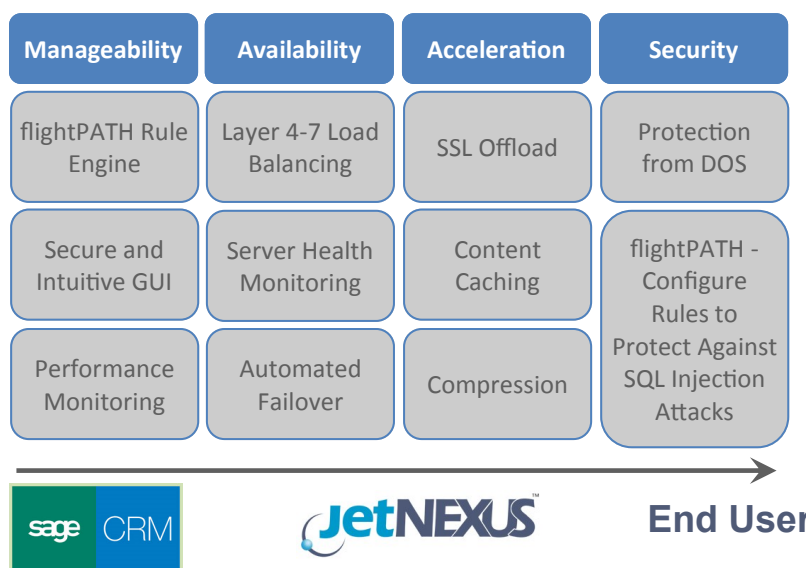

jetNEXUS solutions are feature rich, delivering the advanced functionality and performance expected from a market leading solution at a cost effective price point.

Put simply, jetNEXUS deliver the features that make the biggest difference to end user experience!

Enter jetNEXUS - Application Delivery Control for Sage CRM

jetNEXUS Application Delivery Controller solutions are designed to improve the performance, scalability, reliability and manageability of enterprise applications. They can boost the number of transactions handled by web servers, accelerate end-to-end web application delivery and dramatically improve end user experience.

Features such as; **Dynamic Data Compression**, **SSL Offload**, **Connection Management** and **Content Caching** work to reduce server load and optimise application contents for superb performance and a fantastic end user experience. jetNEXUS solutions also feature **flightPATH**, a powerful, scriptable Layer7 routing engine that enables the creation of intelligent traffic rules for maximum flexibility in service delivery.
